

Guidelines

Training Management Guidelines

The Training Management Guidelines serve to establish standards for the implementation of the numerous training courses the iSchools Project undertakes.

The Training Management Guidelines sets the general rules to ensure that all trainings to be conducted will adopt the training management and teaching principles required for the adult learner.

Standards are also set for the compensation of trainers and the specifications of training kits specific to the 5 courses the iSchools Project implements.

The Training Management Guidelines concludes with a matrix on stakeholder responsibilities before, during and after the conduct of trainings.

Deployment Guidelines

The Deployment Guidelines was intended for the proper setup and installation of an iSchools Internet Learning Laboratory (iWILL). The iWILL is composed of the most tangible components of the project -- hardware, software and Internet connection.

The Deployment Guidelines outline the legal, physical and reporting requirements that must be met during pre- and post-deployment.

After a discussion of the responsibilities of the various iSchools Project stakeholders, a description of the mandatory distribution and floor setup of the ICT equipment is detailed. Strict compliance is essential, as this design has been approved by education experts as adhering to the objective of building ICT literacy.

PC Recycling Implementation Guidelines

The PC Recycling initiative seeks to improve the PC-to-student ratio by maximizing available ICT equipment and minimizing electronic waste through the development of the technical capabilities of selected public high schools nationwide.

The PC Recycling Implementation Guidelines details the program concept and mechanics of this initiative. Also included in the Guidelines are the criteria to be used for selecting program beneficiaries; implementation strategies to be utilized; budget allotment; schedule of implementation; and a list of involved SUC partners.
